# A wide range of new paper formats for different applications

The Mitsubishi photo printers use **dye-sublimation** technology for photographic printing. To make these colour prints, paper and ribbon with ink is needed. On the ribbon are sheets with the colours Cyan, Magenta and Yellow and also an Overcoating. The thermal head in the printer burn the ink on the paper. The overcoat which is also on the ink ribbon protects the print from discoloration from UV, light and the air making the prints water-resistant.

The size of the ink sheet maximize the format of the print. Paper with sheets of 15x20 cm / 6x8" can for example also print 2 photos of 10x15 / 4x6", amazing photo Strips(15x5cm/ 2x6"), fancy Square Photos (15x15cm/6x6") or outstanding Panoramic photos (15x35,7cm / 6x14" - 15x50,8cm / 6x20") .

Mitsubishi also has as other consumables as PostCard, Sticker and **special media**, that provide more printing formats in order to increase printing possibilities. In case of perforated consumable it allows having smaller prints than the standard paper size. This consumable is available for the 4x6 inch / 10x15 cm paper rolls for CP-D70DW-S, CP-D70DW and CP-D90DW printers. The perforation is on 2 inch / 5 cm from the left side of the paper roll. Perforated Media allows to make the popular square format 4x4 inch / 10x10 cm . For the use of this paper on events it is possible the use the left strip for additional content like discount vouchers or branding.

## Special media

Perforated 4x4 / 4x2 inches  
10x10 cm / 10x5 cm

Perforated 3x2 inches  
7,5x5 cm
